# Patient information

## **Community Catheter Care Survey**

Urology Directorate

**You have been given this information leaflet because you have attended the Emergency Department ( A&E) with a problem with your catheter**

## **What is the Community Catheter Care Survey?**

This is a joint survey between The Royal Liverpool University Hospital Trust and the community primary care team. It is a survey of patients attending the Emergency Department with catheter problems.

## **Why do we need to do this survey?**

Some patients with catheters experience problems such as blocking or bypassing. Sometimes these problems can be dealt with by district nurses and sometimes patients need to attend the Emergency Department. In order to try and improve our care of patients with catheters we want to find out how and why patients seek help.

## **Do I need to participate in the survey?**

You do not have to agree to take part in the survey. If you do not wish to then please inform the nursing staff of your decision.

## **What would taking part involve?**

If you agree to take part in the survey your contact information will be passed to the health care professionals in the community.

A few days after your Emergency Department attendance a health care professional will contact you and ask you about the care you had received. Your replies will then be stored in an anonymised way.

### **What will be the benefits of participating this survey?**

There will be no direct benefit to your immediate care from taking part in this survey. However, results from this survey will be used to improve the care of patients with catheters in our area.

### **Further Information:**

**For clinical questions specific to your case,  
please contact your Family Doctor (GP) or  
Continence Team**
